

# CAN AM FIBERS

## ***Implementing sustainable and cost-effective solutions for managing scrap in the roll goods industry.***

- We participate with web manufacturers and converters on developing waste reduction, re-use, and recycling programs, aligned with environmentally responsible strategies. Our focus is the Northeast quadrant of the US.
- We purchase and sell post-manufactured goods: i.e., paper & board, plastic films and nonwovens. Materials can be raw base stocks, WIP, or finished products and can be coated & laminated. Materials are typically of off-grade quality, aged inventory, overruns, and damaged stock.
- We channel products through our main 50,000+ sq. ft. warehouse in Ludlow, MA. We have surge capacity at a 2<sup>nd</sup> facility in Springfield. Put-ups include: rolls, sheets, bales, and pre-packaged goods. We will handle trailer-loads of combo materials to enhance flexibility.
- We stock a wide range of inventory ranging from tissue paper, bag kraft, liner and press boards, soft & hard white papers, SBS board, and polymer films í to higher end functional products. This includes pressure sensitives, holographic packaging laminates, ink jet media, metalized films & papers, and wipe & medical nonwoven fabrics.
- We can work closely with suppliers on planning & creating a **green profit center**. Our business model is: generating a positive cash flow through revenue of saleable scrap materials; while, avoiding/reducing the costs of landfills and incinerators.
- We protect brand and respect confidentiality by exporting materials through a network of selective brokers. We are seeking to expand our supply chain of polymer films and nonwovens.
